

STRATEGIC BLUEPRINT:

National Integrated Case Management

System (NICMS)

Project: Unified Digital Platform for SGBV & TFGBV Case Management

Prepared by: Abishek Pranav GV

Position: Business Analyst

Date: May 7, 2026

Classification: Confidential — Loons Lab / Government of Sri Lanka

01. Problem Definition: The Trauma of the Loop

In Sri Lanka, the current reporting journey for Sexual and Gender-Based Violence (SGBV) and Technology-Facilitated GBV (TFGBV) is fragmented. Victims are forced into a Bureaucratic Maze where they must move between the Police, CCID, and SLCERT, causing them to relive their trauma through repetitive storytelling.

- **Core Objective:** Transform fragmented silos into a **Single Window of Truth** that prioritizes psychological safety and legal integrity.
-

02. Strategic Business Assumptions

As the lead Business Analyst, I have defined these five logical pillars to ensure the system's feasibility in a complex multi-agency environment:

- **Lead Agency Logic:** Every case is assigned a single "Lead Owner" based on the primary offense to eliminate accountability gaps between the six agencies.
 - **Digital Sovereignty:** Agencies maintain their internal databases; NICMS acts as the secure, API-driven bridge.
 - **The Golden Hour Priority:** Digital evidence (chats/social media) is volatile and must be frozen and SHA-256 hashed immediately upon upload to ensure court admissibility.
 - **Consent-First Sharing:** PII (Personally Identifiable Information) is only shared with support agencies (e.g., MoWCA for counseling) if the victim explicitly opts in.
 - **Officer Literacy:** The system assumes basic digital literacy; however, the UI is optimized for zero-training adoption.
-

03. Functional Requirements (FR)

A. The Survivor Journey (Public Portal)

Req. ID	Feature	Description
FR-01	Dynamic Intake	A "Smart Form" using conditional logic. If "Social Media Harassment" is selected, the UI adapts to request URLs and screenshots relevant to SLCERT.
FR-02	Ghost-Tracking	Anonymous users receive a 16-digit Justice Key and QR code. This allows status checks without requiring an email or phone number.
FR-03	Evidence Vault	A military-grade portal that generates an immutable checksum for every file, ensuring it is court-admissible and tamper-proof.
FR-04	Offline-First	Data is cached locally if signal is lost in rural areas and syncs automatically once the connection is restored.

B. The Officer's Workspace (Agency Nexus)

Req. ID	Feature	Description
FR-05	Unified Case File	A shared digital folder where notes from NCPA, CCID, and Police live side-by-side to prevent repetitive questioning.
FR-06	Digital Handshake	A referral protocol requiring receiving agencies to "Accept" a case within a 4-hour SLA, or trigger a high-priority alert.
FR-07	Collaboration Hub	A secure, case-linked internal chat for officers to coordinate (e.g., CCID asking MoWCA for a victim's status).

04. Non-Functional Requirements (The System DNA)

- **Safety Exit (Panic Button):** A persistent floating button that instantly closes the tab and opens a generic search for "Weather in Colombo" to hide activity from an abuser who might enter the room.
- **Zero-Knowledge Encryption:** Sensitive victim data is encrypted so that even database administrators at Loons Lab cannot read it without authorized agency keys.

- **Offline-First Capability:** Form data is cached locally in rural areas with poor connectivity and syncs automatically when the signal returns.

04.1: System Architecture Overview

05. High-Level Design & Success Metrics

UI/UX Philosophy

- **The Public Portal:** Calm, minimalist, and "Search-First". It uses a guided chatbot style to feel like a conversation, not an interrogation.
- **The Agency Nexus: A Kanban-style Dashboard** (To-Do, In Progress, Referred, Resolved) for visual case management.

Target KPIs for Success

- **Response Time:** Reduce Lead Agency assignment from ~48 hours to under 10 minutes.
- **User Sentiment:** 70% of survivors rating the process as "Easy" or "Very Easy".
- **Integrity:** Zero verified cases of evidence tampering due to the SHA-256 vault.

06. Final Thought

The National Integrated Case Management System (NICMS) represents a paradigm shift in how Sri Lanka serves its most vulnerable citizens. By unifying these six government pillars into a single digital ecosystem, we are not just digitizing a process—we are institutionalizing empathy. Success will be measured not by system uptime, but by the reduction in re-victimization and the acceleration of justice. We are moving from a culture of **Bureaucracy** to a mandate of **Protection**.
